Poverty and inequality in Latin America are easily recognizable in the faces of women, Afro-descendents, the indigenous, people with disabilities, victims of HIV/AIDS, and other groups outside the
societal mainstream. Social Inclusion and Economic Development in Latin America reviews the common features of these excluded populations, including their invisibility in official statistics and the stigma, discrimination, and disadvantages they have long endured. But it also examines the region's inclusionary policies and programs that can improve access by these groups to the quality social services and economic and political resources these groups need to level the playing field. Case studies examine ethnic and racial political organization, gender quotas, and labor markets across the region, and social exclusion in Brazil, Honduras, Guatemala, Mexico, and Peru. Comparative studies summarize social inclusion policies of both the European Union and selected countries on the Continent.

The book outlines a journey from enabling models of government and business to strategies for creating both financial and social inclusion and entrepreneurism as mechanisms for sustainable and inclusive growth.

Despite recent advances in important aspects of the lives of girls and women, pervasive challenges remain. These challenges reflect widespread deprivations and constraints and include epidemic levels of gender-based violence and discriminatory laws and norms that prevent women from owning property, being educated, and making meaningful decisions about their own lives--such as whether and when to marry or have children. These often violate their most basic rights and are magnified and multiplied by poverty and lack of education. This groundbreaking book distills vast data and hundreds of studies to shed new light on deprivations and constraints facing the voice and agency of women and girls worldwide, and on the associated costs for individuals, families, communities, and global development. The volume presents major new findings about the patterns of constraints and overlapping deprivations and focuses on several areas key to women's empowerment: freedom from violence, sexual and reproductive health and rights, ownership of land and housing, and voice and collective action. It highlights promising reforms and interventions
from around the world and lays out an urgent agenda for governments, civil society, development agencies, and other stakeholders, including a call for greater investment in data and knowledge to benchmark progress.

NEW YORK TIMES BESTSELLER “In her book, Melinda tells the stories of the inspiring people she’s met through her work all over the world, digs into the data, and powerfully illustrates issues that need our attention—from child marriage to gender inequity in the workplace.” — President Barack Obama “The Moment of Lift is an urgent call to courage. It changed how I think about myself, my family, my work, and what’s possible in the world. Melinda weaves together vulnerable, brave storytelling and compelling data to make this one of those rare books that you carry in your heart and mind long after the last page.” — Brené Brown, Ph.D., author of the New York Times #1 bestseller Dare to Lead “Melinda Gates has spent many years working with women around the world. This book is an urgent manifesto for an equal society where women are valued and recognized in all spheres of life. Most of all, it is a call for unity, inclusion and connection. We need this message more than ever.” — Malala Yousafzai "Melinda Gates's book is a lesson in listening. A powerful, poignant, and ultimately humble call to arms." — Tara Westover, author of the New York Times #1 bestseller Educated A debut from Melinda Gates, a timely and necessary call to action for women's empowerment. “How can we summon a moment of lift for human beings – and especially for women? Because when you lift up women, you lift up humanity.” For the last twenty years, Melinda Gates has been on a mission to find solutions for people with the most urgent needs, wherever they live. Throughout this journey, one thing has become increasingly clear to her: If you want to lift a society up, you need to stop keeping women down. In this moving and compelling book, Melinda shares lessons she’s learned from the inspiring people she’s met during her work and travels around the world. As she writes in the introduction, “That is why I had to write this book—to share the stories of people who have given focus and urgency to my life. I want all of us to see ways we can lift women up where we live.” Melinda’s unforgettable narrative is
backed by startling data as she presents the issues that most need our attention—from child marriage to lack of access to contraceptives to gender inequity in the workplace. And, for the first time, she writes about her personal life and the road to equality in her own marriage. Throughout, she shows how there has never been more opportunity to change the world—and ourselves. Writing with emotion, candor, and grace, she introduces us to remarkable women and shows the power of connecting with one another. When we lift others up, they lift us up, too.

A NEW YORK TIMES BESTSELLER “One of the most important books of the current moment.”—Time “A rousing call to action It should be required reading for everyone.”—Gabrielle Union, author of We’re Going to Need More Wine “A brutally candid and unobstructed portrait of mainstream white feminism.”—Ibram X. Kendi, author of How to Be an Antiracist A potent and electrifying critique of today's feminist movement announcing a fresh new voice in black feminism Today’s feminist movement has a glaring blind spot, and paradoxically, it is women. Mainstream feminists rarely talk about meeting basic needs as a feminist issue, argues Mikki Kendall, but food insecurity, access to quality education, safe neighborhoods, a living wage, and medical care are all feminist issues. All too often, however, the focus is not on basic survival for the many, but on increasing privilege for the few. That feminists refuse to prioritize these issues has only exacerbated the age-old problem of both internecine discord and women who rebuff at carrying the title. Moreover, prominent white feminists broadly suffer from their own myopia with regard to how things like race, class, sexual orientation, and ability intersect with gender. How can we stand in solidarity as a movement, Kendall asks, when there is the distinct likelihood that some women are oppressing others? In her searing collection of essays, Mikki Kendall takes aim at the legitimacy of the modern feminist movement, arguing that it has chronically failed to address the needs of all but a few women. Drawing on her own experiences with hunger, violence, and hypersexualization, along with incisive commentary on politics, pop culture, the stigma of mental health, and more, Hood Feminism...
Read Free Inclusion Of Poor Women And Dalits In Community Forestry

delivers an irrefutable indictment of a movement in flux. An unforgettable debut, Kendall has written a ferocious clarion call to all would-be feminists to live out the true mandate of the movement in thought and in deed.

Connecting the Disconnected presents the findings of the field research designed to evaluate financial practices and strategies among urban and rural Bhutanese households. The study was commissioned in 2012 by the Royal Monetary Authority of Bhutan and the World Bank to provide qualitative evidence to the country's Financial Inclusion Policy. The book explores where, how, and why different demographic groups save, borrow, send remittances, and insure themselves; it also evaluates the potential for innovations to extend financial inclusion. Analysis of results from focus group discussions and in-depth interviews reveals three key patterns: Bhutan is a cash-based economy where households have a vibrant, if informal, savings and lending culture; rural areas are particularly underserved by formal financial services; and women and youth represent an untapped market segment. The book reveals a demand for financial services with less complex and time-consuming banking procedures than are currently offered—particularly, small, periodic savings and loan services; more accessible deposit and withdrawal services; and flexible loan requirements. In response to the demand for saving locally and in small amounts, group savings schemes and cooperatives are slowly emerging in Bhutan. These could serve rural communities until households become integrated into the formal financial system, though support and capacity building will be critical to ensure that savings are protected. Households struggle with banks' requirements and procedures and turn instead to informal lenders. Even households with some access to the formal financial sector continue to use informal financing. The findings highlight a need for formal microfinance services providing small group and individual loans with flexible repayments. Savings strategies and attitudes suggest that Bhutanese households could benefit from financial literacy education. More effective consumer protection is also needed. For instance, dispute resolution that is easily accessed
would increase trust in the financial sector. Also, the spread of mobile phone banking has been constrained by the limited mobile banking technology in use and low English-language literacy. However, the widespread use of mobile phones suggests that innovative technology could create new opportunities. Other innovative strategies worth considering include branchless banking to improve financial access in remote areas. Finally, use of insurance services appears to be limited by a lack of knowledge. Remittances are used to send money both within Bhutan and abroad, but many rural communities lack access to formal remittance services and must rely instead on informal—and often expensive—options.

The World Bank Group’s Women, Business and the Law examines laws and regulations affecting women’s prospects as entrepreneurs and employees across 190 economies. Its goal is to inform policy discussions on how to remove legal restrictions on women and promote research on how to improve women’s economic inclusion.

This book provides policy guidance to help policymakers address women’s and girls’ needs for financial education, and a comprehensive analysis of the current status of knowledge on gender differences in financial literacy and policy responses in terms of financial education for women and girls.

This book, the first of two volumes, highlights the concept of financial inclusion from the Islamic perspective. An important element of the Sustainable Development Goals (SDGs), financial inclusion has been given significant prominence in reform and development agendas proposed by the United Nations and G-20. The significance of Islamic financial inclusion goes beyond improved access to finance to encompass enhanced access to savings and risk mitigation products, as well as social inclusion that allows individuals and companies to engage more actively in the real economy. It represents one of the important drivers of economic growth. Gender disparity exists within financial access and its extent varies widely across world economies. South Asia,
the Middle East and North Africa have the largest gender gaps, with women in these regions being forty per cent less likely than men to have a formal account at a financial institution. Analysing how Islamic financial inclusion can empower individuals, this volume explores the contribution of Islamic microfinance in achieving SDGs and solving income and wealth inequality. Comprising a combination of empirical evidence, theory and modelling, this edited collection illustrates how to improve access to finance, making it essential reading for those researching both Islamic finance and development finance.

Women have experienced significant changes in various spheres of their lives during the last decades as Bangladesh made economic progress. Yet women’s economic engagement and empowerment are subdued, as they cannot make sufficient choices for themselves. This book provides a comprehensive analysis of the economic developments in gender equality in Bangladesh. Through examining women’s participation in the labour force, ownership and control of household assets, use and control of financial assets, and opportunities for entrepreneurship, the authors have made concrete recommendations to overcome challenges that lie ahead for women’s economic empowerment. This book is an important contribution to the knowledge on interventions required by the policy makers and broader stakeholders towards narrowing gender gaps. --Fahmida Khatun, PhD, Executive Director, Centre for Policy Dialogue (CPD), Bangladesh

The women’s story is central to Bangladesh’s economic and social transformation. There is an urgent need to deepen researched understanding of the multidimensional pathways of women’s economic empowerment and extent of real progress made. Voices to Choices is an important contribution to this story. Surely, the journey of women’s economic empowerment remains a long and challenging one. Realizing the full benefits of new opportunities is often hampered by both new and entrenched insecurities. The task is as much one of empowering women’s agency as of dismantling barriers. The responsibility is as much women’s as society’s. --Hossain Zillur Rahman, PhD, Executive Director, International Human Rights Commission
Chairman, Power and Participation Research Centre (PPRC) This book provides critical insights and is timely, as it outlines how girls and women in Bangladesh have gained more opportunities in labor force participation, control over household and financial assets, as well as greater prospects for entrepreneurship. The findings will greatly contribute to future policy and planning for government and key stakeholders working to advance women’s economic empowerment in the country. --Sabina Faiz Rashid, PhD, Dean and Professor, BRAC James P. Grant School of Public Health
BRAC University

Banking the Poor explores level and determinants of financial access in 54 countries, mostly in Africa. It collects information from two sources: central banks and leading commercial banks in each surveyed country. It explores associations between countries' banking policies and practices and their levels of financial access, measured in terms of the numbers of bank account per thousand adults. It builds on the previous work measuring financial access through information from regulators, from banks, and also from users' perspectives in household surveys.

Social inclusion is on the agenda of governments, policymakers, and nonstate actors around the world. Underpinning this concern is the realization that despite progress on poverty reduction, some people continue to feel left out. This report aims to unpack the concept of social inclusion and understand better how policies can be designed to further inclusion. First, the report offers a definition of social inclusion as the "process of improving the terms for individuals and groups to take part in society." It unpacks different domains of society that excluded groups and individuals are at particular risk of being left out of -- markets, services, and spaces. Second, the report discusses the most important global mega-trends such as migration, climate change, and aging of societies, which will impact challenges and opportunities for inclusion. Finally, it argues that despite these challenges, change towards inclusion is possible and offers examples of inclusionary policies.
There is growing evidence that appropriate financial services have substantial benefits for consumers, especially women and poor adults. This paper provides an overview of financial inclusion around the world and reviews the recent empirical evidence on how the use of financial products—such as payments services, savings accounts, loans, and insurance—can contribute to inclusive growth and economic development. This paper also discusses some of the challenges to achieving greater financial inclusion and directions for future research.

Trade can dramatically improve women’s lives, creating new jobs, enhancing consumer choices, and increasing women’s bargaining power in society. It can also lead to job losses and a concentration of work in low-skilled employment. Given the complexity and specificity of the relationship between trade and gender, it is essential to assess the potential impact of trade policy on both women and men and to develop appropriate, evidence-based policies to ensure that trade helps to enhance opportunities for all. Research on gender equality and trade has been constrained by limited data and a lack of understanding of the connections among the economic roles that women play as workers, consumers, and decision makers. Building on new analyses and new sex-disaggregated data, Women and Trade: The Role of Trade in Promoting Gender Equality aims to advance the understanding of the relationship between trade and gender equality and to identify a series of opportunities through which trade can improve the lives of women.

"The economic and social imperative for women’s economic empowerment is clear. Greater gender equality boosts economic growth and leads to better development outcomes. It contributes to reducing income inequality and boosting economic diversification and, in turn, supports economic resilience. Gender equality is one of the 17 global UN Sustainable Development Goals, which provide a roadmap for ending poverty, protecting the planet, and ensuring that all people enjoy peace and prosperity. The G7 has emphasized the need for closing the gender gap. The Taormina..."
Leaders’ Summit in 2017 renewed the emphasis on promoting women’s empowerment, which the leaders see as a crucial contribution to promoting sustainable development. In this regard, leaders committed to mainstreaming gender equality into all their policies. This is carried forward by Canada’s G7 Presidency. With growing recognition that gender equality promotes economic stability and growth, the IMF has scaled up its work in this area and is committed to continue these efforts. Work by the IMF will focus on (i) deepening its understanding of the economic benefits of women’s empowerment, both in the labor market and through more equal opportunities for boys and girls, also against the background of persistent megatrends, including in an environment of rapid technological change; (ii) integrating the analysis into Fund policy dialogue with member countries; (iii) providing customized assistance, workshops, and peer-learning courses in areas such as gender budgeting; and (iv) expanding collaboration with other international institutions on the subject to benefit from complementary areas of expertise.

Experts report on the latest research on extending access to financial services to the 2.5 billion adults around the world who lack it. About 2.5 billion adults, just over half the world's adult population, lack bank accounts. If we are to realize the goal of extending banking and other financial services to this vast "unbanked" population, we need to consider not only such product innovations as microfinance and mobile banking but also issues of data accuracy, impact assessment, risk mitigation, technology adaptation, financial literacy, and local context. In Banking the World, experts take up these topics, reporting on new research that will guide both policy makers and scholars in a broader push to extend financial markets. The contributors consider such topics as the complexity of surveying people about their use of financial services; evidence of the impact of financial services on income; the occasional negative effects of financial services on poor households, including disincentives to work and overindebtedness; and tools for improving access such as nontraditional credit scores, financial incentives for banking, and identification technologies that
can dramatically reduce loan default rates.

In recent years, along with the growing recognition of the rural gender gap in financial access as a key constraint to rural development, research has focused increasingly more towards analysing in depth the financial habits and patterns followed by women in rural areas, in order to produce observations and insights that could foster a more gender-sensitive policy approach towards financial inclusion. In line with this trend, this paper sets to explore the financial habits and constraints of rural women in two Sub-Saharan African countries (Mozambique, Tanzania), both at country and village level, with the objective of answering how, and why, they differ from those of their male counterparts. Building on the results achieved through this analysis, as well as on the general literature available on the topic, this paper aims to develop a range of general recommendations that can assist both local policymakers and other public stakeholders, as well as formal financial service providers, in shaping their approach towards a more gender-sensitive provision of rural financial services.

Asia has made significant progress in financial inclusion, but both its across-country and intra-country disparities are among the highest in the world. The gaps between the rich and the poor, rural and urban populations, and men and women remain deep. Income is the main determinant of the level of financial inclusion; but other factors, such as geography, financial sector structure, and policies, also play important roles. While some countries in the Asia-Pacific region are leaders in fintech, on average the region lags behind others in several important areas such as online (internet) purchases, electronic payments, mobile money, and mobile government transfers. This Departmental Paper aims to take stock of the development and current state of financial inclusion and shed light on policies to advance financial inclusion in the region. The research focuses on the impact of financial inclusion on economic growth, poverty reduction, and inequality, linkages between financial inclusion and macroeconomic policies, as well as structural policies that are important for improving financial
Read Free Inclusion Of Poor Women And Dalits In Community Forestry

inclusion. Given the increasing importance of financial technologies (fintech), the paper also provides a snapshot of the fintech landscape in the Asia-Pacific.

The State of Economic Inclusion Report 2021 sheds light on one of the most intractable challenges faced by development policy makers and practitioners: transforming the economic lives of the world’s poorest and most vulnerable people. Economic inclusion programs are a bundle of coordinated, multidimensional interventions that support individuals, households, and communities so they can raise their incomes and build their assets. Programs targeting the extreme poor and vulnerable groups are now under way in 75 countries. This report presents data and evidence from 219 of these programs, which are reaching over 90 million beneficiaries. Governments now lead the scale-up of economic inclusion interventions, often building on preexisting national programs such as safety nets, livelihoods and jobs, and financial inclusion, and 93 percent of the total beneficiaries are covered by government programs. The report offers four important contributions: • A detailed analysis of the nature of these programs, the people living in extreme poverty and vulnerability whom they support, and the organizational challenges and opportunities inherent in designing and leading them. • An evidence review of 80 quantitative and qualitative evaluations of economic inclusion programs in 37 countries. • The first multicountry costing study including both government-led and other economic inclusion programs, indicating that programs show potential for cost efficiencies when integrated into national systems. • Four detailed case studies featuring programs under way in Bangladesh, India, Peru, and the Sahel, which highlight the programmatic and institutional adaptations required to scale in quite diverse contexts. Data from the report are available on the PEI Data Portal (http://www.peiglobal.org), where users can explore and submit data to build on this baseline.

Towards Financial Inclusion in India is a treatise on ‘inclusion of the Last, the Lost and the Least’. It provides an in-depth analysis of the
various pillars of financial inclusion such as micro-remittance, micro-savings, micro-credit and micro-insurance. The book stresses on financial literacy and counselling, which are core to the achievement of financial inclusion. The authors dwell upon the difficulties faced by vulnerable groups like women, tribals, weavers and rural populace while trying to access financial services. The book also analyzes inclusion measures like ICT interventions, post office model and payment mechanisms. Striking a balance between pragmatic policy-making and a genuine social security mechanism, the book emphasises that financial services should be cost-effective and easily affordable to the vast majority of disadvantaged and low-income groups. The roadmap for financial inclusion drawn by the authors, if adopted, will go a long way in addressing the needs and demands of last-mile clients, especially the vulnerable groups.

Technology is changing the landscape of the financial sector, increasing access to financial services in profound ways. These changes have been in motion for several years, affecting nearly all countries in the world. During the COVID-19 pandemic, technology has created new opportunities for digital financial services to accelerate and enhance financial inclusion, amid social distancing and containment measures. At the same time, the risks emerging prior to COVID-19, as digital financial services developed, are becoming even more relevant.

One of the most urgent challenges in African economic development is to devise a strategy for improving statistical capacity. Reliable statistics, including estimates of economic growth rates and per-capita income, are basic to the operation of governments in developing countries and vital to nongovernmental organizations and other entities that provide financial aid to them. Rich countries and international financial institutions such as the World Bank allocate their development resources on the basis of such data. The paucity of accurate statistics is not merely a technical problem; it has a massive impact on the welfare of citizens in developing countries. Where do these statistics
Read Free Inclusion Of Poor Women And Dalits In Community Forestry

originate? How accurate are they? Poor Numbers is the first analysis of the production and use of African economic development statistics. Morten Jerven’s research shows how the statistical capacities of sub-Saharan African economies have fallen into disarray. The numbers substantially misstate the actual state of affairs. As a result, scarce resources are misapplied. Development policy does not deliver the benefits expected. Policymakers’ attempts to improve the lot of the citizenry are frustrated. Donors have no accurate sense of the impact of the aid they supply. Jerven’s findings from sub-Saharan Africa have far-reaching implications for aid and development policy. As Jerven notes, the current catchphrase in the development community is “evidence-based policy,” and scholars are applying increasingly sophisticated econometric methods—but no statistical techniques can substitute for partial and unreliable data.

Despite some improvement since 2011, Latin America and the Caribbean continue to lag behind other regions in terms of financial inclusion. There is no clear evidence that fintech developments have supported greater financial inclusion in LAC, contrary to what has been observed elsewhere in the world. Case studies by national policy experts suggest that barriers to entry in the financial sector, along with a constraining regulatory environment, may have hindered a faster adoption of fintech. However, fintech development seems to have accelerated in the wake of the COVID-19 pandemic and with the support of recent policy initiatives.

Violent conflicts today are complex and increasingly protracted, involving more nonstate groups and regional and international actors. It is estimated that by 2030—the horizon set by the international community for achieving the Sustainable Development Goals—more than half of the world’s poor will be living in countries affected by high levels of violence. Information and communication technology, population movements, and climate change are also creating shared risks that must be managed at both national and international levels. Pathways for Peace is a joint United
Nations World Bank Group study that originates from the conviction that the international community’s attention must urgently be refocused on prevention. A scaled-up system for preventive action would save between US$5 billion and US$70 billion per year, which could be reinvested in reducing poverty and improving the well-being of populations. The study aims to improve the way in which domestic development processes interact with security, diplomacy, mediation, and other efforts to prevent conflicts from becoming violent. It stresses the importance of grievances related to exclusion—from access to power, natural resources, security and justice, for example—that are at the root of many violent conflicts today. Based on a review of cases in which prevention has been successful, the study makes recommendations for countries facing emerging risks of violent conflict as well as for the international community. Development policies and programs must be a core part of preventive efforts; when risks are high or building up, inclusive solutions through dialogue, adapted macroeconomic policies, institutional reform, and redistributive policies are required. Inclusion is key, and preventive action needs to adopt a more people-centered approach that includes mainstreaming citizen engagement. Enhancing the participation of women and youth in decision making is fundamental to sustaining peace, as well as long-term policies to address the aspirations of women and young people.

Using several recently available global datasets, this Staff Discussion Note examines macroeconomic effects of financial inclusion. It finds significant benefits to economic growth from financial inclusion, but the benefits diminish as financial inclusion and depth become large. Broadening access to credit can compromise economic and bank stability in countries with weak bank supervision. Other forms of financial inclusion—such as access to and use of bank accounts, branches, and ATMs—do not hurt stability, and can be promoted extensively. The note finds that gaps in financial inclusion are associated with economic inequality, but the association appears relatively weak.
This book explores the relationships between financial inclusion, poverty and inclusive development from Islamic perspectives. Financial inclusion has become an important global agenda and priority for policymakers and regulators in many Muslim countries for sustainable long-term economic growth. It has also become an integral part of many development institutions and multilateral development banks in efforts to promote inclusive growth. Many studies in economic development and poverty reduction suggest that financial inclusion matters. Financial inclusion, within the broader context of inclusive development, is viewed as an important means to tackle poverty and inequality and to address the sustainable development goals (SDGs). This book contributes to the literature on these topics and will be of interest to researchers and academics interested in Islamic finance and financial inclusion.

We investigate the link between gender inequality in financial inclusion and income inequality, with three contributions to the recent literature. First, using a micro-dataset covering 146,000 individuals in over 140 countries, we construct novel, synthetic indices of the intensity of financial inclusion at the individual and country level. Second, we derive the distribution of individual financial access “scores” across countries to document a “Kuznets”-curve in financial inclusion. Third, cross-country regressions confirm that our measure of inequality in financial access is significantly related to income inequality, above and beyond other factors previously highlighted in the literature.

Diverse social programmes—including conditional cash transfer programmes, labour and production inclusion programmes and social pensions—are being implemented in Latin American and Caribbean countries with the aim of ending poverty and reducing inequalities throughout the life cycle. This book offers an up-to-date analysis of these programmes and the way they relate to labour inclusion, and analyses ongoing debates regarding the possible incentives and disincentives they create in terms of the labour supply, formalization and child labour among the target population.
In the context of much touted ‘inclusive economic growth’ the urgency of the concern is to discern the fact on a) what has happened ‘after the inclusion’ so far achieved, in the demand side from deontological perspectives? b) Is the inclusion also inclusive enough? C)Is there any unceremonious exclusion after ceremonious inclusion made through inclusion oriented interventions without ensuring sustainability? This monograph seeks to probe the fact empirically. The ‘Inclusion’ of the excluded has two dimensions viz., Spatial or geographical inclusion and Human inclusion. From economic growth perspectives, the term ‘Inclusive inclusion’ requires a holistic inclusion of area qualitatively with the integrated productive connectivity infrastructure for running sustainable economic activities. This Aside, from development orientation, as a corollary to the so called inclusive inclusion demands a comprehensive human development of the people in the included habitation. In the context of nonappearance of these qualitative dimensions of inclusive inclusion, any claim, with mere numerically supported inclusion, for any inclusion oriented intervention for that matter, be it concerned with social, education, health and financial one, symbolizes only a “Mystic inclusion.” A critical analysis has been made on a slew of empirically tested evaluative findings for demystifying the hidden truth on the impact of the inclusion. As a way forward, Bharthya approach is suggested focusing on Indianization of planning system at district level and indigenization of the product and services that suit the marginalized people at the bottom level of poverty pyramid, has been made for facilitating candid inclusion from ‘Make in India’ perspectives. Towards this end, for the benefit of the research students and academic institutions, some useful hypotheses on the inclusion and poverty are presented for testing in future studies and developing new theories for filling large gap on the subject in social science.

Womens lack of economic empowerment not only impedes growth and poverty reduction, but also negatively impacts education and health outcomes for children. Thus, it is extremely important to ensure that women are economically empowered. Financial inclusion may be defined as the process of ensuring access to
financial services and timely and adequate credit where needed by vulnerable groups, such as women, at an affordable cost. Self-help Group (SHG)-Bank Linkage Programme was launched in 1992 as a flagship programme by the National Bank for Agriculture and Rural Development (NABARD). The objective is to meet the financial needs of the poor by linking SHGs with the formal credit agencies. Financial inclusion of the women can be best ensured through SHGs. The present volume contains 10 papers, authored by experts in the field, which provide valuable insights into the importance and functioning of SHGs to ensure financial inclusion and hence economic empowerment of women.

Based on focus groups and interviews with nearly 4,000 women, men, girls, and boys from 20 countries, this book explores areas that are less often studied in gender and development: gender norms and agency. It reveals how little gender norms have changed, how similar they are across countries, and how they are being challenged and contested.

More than one billion people still live below the poverty line – most of them in South Asia and Sub-Saharan Africa. Financial inclusion is a major issue, as more than three-quarters of the numbers of poor and disadvantaged women and men do not have access to financial products and services, such as bank accounts, affordable and suitable loans, and insurance. The key objective of this book is to provide practical case studies of financial inclusion, rather than focus on academic debates such as the ideological basis of promoting microfinance. Using the recently adopted Sustainable Development Goals as an overall framing of the issues, it shows how poor and disadvantaged women and men can be bankable if the right facilitation for maximizing opportunities and addressing constraints are in place. Case studies confirm that achieving inclusive and sustainable access to financial products and services goes beyond simply enabling poor and disadvantaged women and men to have access to credit, or the ability to open a bank account. Examples from Africa, Asia and Latin America demonstrate encouraging progress in making microcredit accessible to millions
of poor people. The foremost challenge, however, has been to ensure that they have access to, and usage intensity of, suitable and affordable financial products and services that meet the needs of their livelihoods as well as risks and mitigation strategies. This requires understanding that poor and disadvantaged women and men do not exist in isolation from complex and interdependent functions in the financial system, which includes a number of actors, diversified services, constraints (not just symptoms) and capacities and incentives. Overall, the book provides a rich source of examples of how building inclusive financial systems can empower the world's poor – by increasing income and employment opportunities, securing livelihoods and reducing poverty.

Microfinance is the business of giving small, collateral-free loans to poor borrowers that are paid back in frequent intervals with interest. While these for-profit microfinance institutions (MFIs) promise social and economic empowerment, they have mainly succeeded at enfolding the poor—especially women—into the vast circuits of global finance. Financializing Poverty ethnographically examines how the emergence of MFIs has allowed financial institutions in the city of Kolkata, India, to capitalize on the poverty of its residents. This book reveals how MFIs have restructured debt relationships in new ways. On the one hand, they have opened access to new streams of credit. However, as the network of finance increasingly incorporates the poor, the "inclusive" dimensions of microfinance are continuously met with rigid forms of credit risk management that reproduce the very inequality the loans are meant to alleviate. Moreover, despite being collateral-free loans, the use of life insurance to manage the high mortality rates of poor borrowers has led to the collateralization of life itself. Thus the newfound ability of the poor to use MFI loans has entrapped them in a system dependent not only on their circulation of capital, but on the poverty that threatens their lives.

Despite the rapid spread of financial and banking system in India after Independence in 1947, a large segment of the society--particularly low-income households in rural areas--has
very little access to financial services, both formal and semi-formal. As a consequence, many of them have to depend either on their own or high cost informal sources of finance, such as moneylenders. This is particularly true of the sporadic financial requirements of poor households for emergency purposes such as medical treatment. It is well-known that poor people, small entrepreneurs and other disadvantaged groups are presently excluded from the financial sector, which leads to their marginalisation and denial of opportunity to grow and prosper. Hence, financial inclusion of the disadvantaged and marginalized sections of society is a prerequisite for healthy and harmonious socio-economic development of India. Financial inclusion is the process of providing wide range of financial services and adequate credit in time to the weaker sections and low-income groups at an affordable cost. Merely having a bank account may not be a good indicator of financial inclusion. The essence of financial inclusion is to ensure that a range of appropriate financial services are available to every individual so that he/she may show his/her worth to the society. It has been widely accepted that micro finance is the most important tool of financial inclusion. Provisions of micro finance to the poor, especially women in rural areas, coupled with supporting activities like education, training and skill formation, can transform Indian economy on desired lines. Self-help groups (SHGs) represent a unique approach to financial intermediation. The approach combines access to low-cost financial services with a process of self-management and development. The present work is an attempt to emphasize the importance of financial inclusion of the poor and underlines the role of micro finance and SHGs in this endeavour.

In the last couple of years there has been a spurt of growing interest in and awareness about questions of social exclusion and inclusion. While the nature of exclusion in India has centered around the caste system, other disadvantaged groups such as tribal, women and poor have also suffered from similar disabilities. Their politics of exclusion and inclusion, censure and celebration show that they wish to be a part of the so-called mainstream
academic discourse yet cannot be. The objective of this book is to discuss about social exclusion arising out of institutions of caste and gender and the inclusive policies designed for them. This book makes a comprehensive analysis on the thematic issues identified for this seminar within the framework of human rights education. The recommendations made through this book are expected to influence the policy of inclusive growth within the broad framework of human rights education. This book is expected to fulfill the teaching research and extension needs of academics, research scholars, students, pursuing subject like sociology, anthropology, social work, history, economics, political science, rural development, women studies, futurology, public administration, etc.

1.1 PREAMBLE The concept of financial inclusion can be traced back to the year 1904 when co-operative movement took place in India. It gained momentum in 1969 when 14 major commercial banks of the country were nationalized and lead bank scheme was introduced shortly thereafter. Branches were opened in large numbers across the country and even in the areas which were hitherto being neglected. Even after all these measures a sizable portion of population of the country could not be brought under the fold of banking system. Financial inclusion is the availability of banking services at an affordable cost to disadvantaged and low-income groups. In India, the basic concept of financial inclusion is having a Savings or Current Account with any bank. In reality, it includes loans, insurance services, and much more. The Indian banking system will have to deliver on the plan for financial inclusion. The system, which demonstrated its resilience in the face of the recent global financial crisis, should adopt strong and urgent measures to reach the unbanked segment of society and unlock their savings and investment potentials.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex
database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

One of the major tools of attaining proper development all around the world is complete financial inclusion, such that all classes of people can secure their lifestyles through access to financial services from formal sectors. Expanding access to resources and increasing self-employment opportunities help reduce poverty and improve social development. The Handbook of Research on Microfinancial Impacts on Women Empowerment, Poverty, and Inequality is an essential reference source that discusses the role of financial inclusion in gender equality, as well as economic independence and self-employment. Featuring research on topics such as inequality, collaborative economy, and social responsibility, this publication is ideally designed for policy makers, economic researchers, and academicians seeking coverage on social mobilization, capital formation, capacity building, and pro-poor
Having understood the necessity of poverty alleviation alongside financial inclusion through microfinance intervention, this book makes an attempt to fill the knowledge gap in relation to the potential synergies among microfinance, poverty alleviation and financial inclusion. As a part of empirical study, it examines the correlation between poverty alleviation and financial inclusion by thoroughly analyzing the key microfinance models such as SHG-Bank Linkage Program (SBLP) model, Microfinance Institutions (MFI) model and Business Correspondent (BC) Model; and offers some interesting observations, which are quite relevant in the present policy context. It also makes an effort to address one of the fundamental questions as to why the poor, especially women are unabatedly depending upon MFIs, despite the successful functioning of SBLP model in fulfilling the same objective. This book is a reminder of the fact that any effort to achieve complete financial inclusion without alleviating poverty is a futile exercise and financial inclusion would be successful only if financial literacy is vigorously promoted along with poverty alleviation schemes and programs.

Women, Business and the Law 2021 is the seventh in a series of annual studies measuring the laws and regulations that affect women’s economic opportunity in 190 economies. The project presents eight indicators structured around women’s interactions with the law as they move through their lives and careers: Mobility, Workplace, Pay, Marriage, Parenthood, Entrepreneurship, Assets, and Pension. This year’s report updates all indicators as of October 1, 2020 and builds evidence of the links between legal gender equality and women’s economic inclusion. By examining the economic decisions women make throughout their working lives, as well as the pace of reform over the past 50 years, Women, Business and the Law 2021 makes an important contribution to research and policy discussions about the state of women’s economic empowerment. Prepared during a global pandemic that threatens progress toward gender equality, this edition also
